Admin Portal: Employee Compensation and Billing Rate Management

We need a clear and structured way for the admin team to manage employee pay changes, bonuses, and client billing changes from the admin portal.

This flow is for cases where the change is being handled by an admin, not directly by the client inside the client portal. The client may have requested the change offline, but the actual action is being entered and processed by the admin team.

Core Structure

Inside each employee profile in the admin portal, compensation-related items should be separated clearly.

There should be a dedicated area for:

1. Employee Pay Management Used to manage the employee's pay rate, raises, and bonuses.

2. Billing Rate Management Used to manage the rate billed to the client.

These should not be treated as the same thing.

A raise may affect both employee pay and billing rate, but billing rate should not live inside the raise section as a standalone editable field. Billing rate should exist as its own clearly defined admin-controlled area.

Main Principle

Employee pay and client billing are related, but they are not the same.

The system must support situations where:

- the employee gets a raise and the client pays all of it
- the employee gets a raise and Hello Team pays all of it
- the employee gets a raise and the client pays only part of it
- the billing rate is edited separately for another reason
- a bonus is given and may or may not be passed through to the client

Because of that, the admin portal must track both sides separately:

- what the employee is paid

- what the client is billed

Required Sections in the Employee Record

A. Employee Pay

This area should show:

- current hourly pay rate
- effective date of current rate
- pay history
- raise history
- bonus history

Actions in this area should include:

- Give Raise
- Give Bonus
- Edit Employee Pay Rate

B. Billing Rate

This area should show:

- current client billing rate
- effective date of current billing rate
- billing rate history

Actions in this area should include:

- Edit Billing Rate

Important Structural Rule

Editing the billing rate should not be part of the raise form as a manual free edit.

If a raise causes the billing rate to increase, the system should calculate that based on the raise workflow and the selected client-covered portion.

If an admin wants to manually change the billing rate for some other reason, that should happen separately in the Billing Rate section.

Direct Manual Edits

The admin portal should support manual edits in two separate places:

1. Edit Employee Pay Rate

This is a direct admin action to change the employee's pay rate without using the formal raise workflow.

This should be used for exceptions, corrections, or special cases.

2. Edit Billing Rate

This is a direct admin action to change the client billing rate without using the raise workflow.

This should also be used only when needed for exceptions, corrections, special pricing decisions, or account adjustments.

Both of these direct edits should:

- require the normal two step approval process
- create a full audit trail
- show old value and new value
- store the effective date
- store the reason or internal note
- store who submitted it
- store who approved it
- store date and time

These direct edits should not automatically notify the client unless explicitly configured to do so.

Raise Workflow

There should be a separate structured workflow called:

Give Raise

This is the proper way to raise an employee's pay when the system needs to track whether the client is covering all, part, or none of the increase.

The raise flow should live under Employee Pay, not under Billing Rate.

Raise Form Fields

When an admin selects Give Raise, the system should ask for:

- Effective date
- Reason for raise
- Total raise amount per hour
- Coverage type
- If partial, amount the client will cover
- Internal notes

Coverage Type Options

The system should allow the admin to choose one of the following:

1. Client covers full raise
2. Client covers part of the raise
3. Hello Team covers full raise

Raise Logic

Rule 1 The employee always receives the full raise amount entered. If the admin enters a raise of $3.00 per hour, the employee's pay rate increases by the full $3.00.

Rule 2 The client billing rate only increases by the portion the client is covering.

Rule 3 If Hello Team is covering the full raise, the billing rate does not change.

Rule 4 If the client is paying none of the raise, the client should not receive a notification and should not see anything in the client portal about that raise. No mention of the raise, no trace of it, nothing. Fully internal.

Scenario 1: Client Covers Full Raise

Example:

- current employee pay rate: $5.00/hour
- current billing rate: $10.00/hour

- raise amount: $2.00/hour
- coverage type: client covers full raise

Result:

- new employee pay rate: $7.00/hour
- new billing rate: $12.00/hour

The employee gets the full raise.
The client billing rate increases by the full same amount.

The system should:

- save the raise record
- update the employee pay rate
- update the billing rate
- apply both changes on the effective date
- require two step approval before activation
- send a client notification

Client Notification Rules for Full Client Coverage

When the client is covering the full raise, the client notification and portal display should show:

- the raise amount (the per-hour increase, for example "$2.00 per hour")
- confirmation that the employee received the full raise amount
- the new billing rate
- the effective date
- a congratulatory tone, for example: "Congratulations, you've given your employee a raise of $2.00 per hour. Your employee received the full amount."

The client notification should NOT show:

- the employee's pay rate (old or new)
- the employee's current or previous compensation
- internal margin details
- internal notes

The principle: we tell the client what the raise was (because they paid for it), but we never show them the employee's actual pay rate.

Scenario 2: Hello Team Covers Full Raise

Example:

- current employee pay rate: $5.00/hour
- current billing rate: $10.00/hour
- raise amount: $2.00/hour
- coverage type: Hello Team covers full raise

Result:

- new employee pay rate: $7.00/hour
- billing rate stays: $10.00/hour

The employee gets the full raise.
The client billing rate does not change.

The system should:

- save the raise record
- update the employee pay rate
- leave the billing rate unchanged
- require two step approval before activation
- send no client email
- show nothing in the client portal

Client Notification Rules for Full Hello Team Coverage

When Hello Team is covering the full raise:

- no email goes to the client
- nothing appears in the client portal
- no mention of a raise anywhere client-facing
- no trace that a raise even happened

This must remain fully internal.

Scenario 3: Client Covers Part of the Raise

Example:

- current employee pay rate: $5.00/hour
- current billing rate: $10.00/hour
- total raise amount: $3.00/hour
- client-covered portion: $1.00/hour
- Hello Team-covered portion: $2.00/hour

Result:

- new employee pay rate: $8.00/hour
- new billing rate: $11.00/hour

The employee gets the full $3.00 raise.
The client billing rate only increases by $1.00.

The system should:

- save the full raise record
- save the split between client-covered and Hello Team-covered amounts
- update employee pay rate by the full raise amount
- update billing rate only by the client-covered amount
- require two step approval before activation
- notify the client

Client Notification Rules for Partial Client Coverage

When the client is covering only part of the raise, the client notification and portal display should show:

- the new billing rate
- the effective date

The client notification should NOT show:

- the total raise amount
- the client-covered portion amount
- the Hello Team-covered portion amount
- the employee's pay rate (old or new)
- the employee's raise amount

- internal margin details
- internal notes

The principle: when the raise is split, we do not tell the client the raise amount at all. We only tell them their billing rate has changed and what the new billing rate is. We never show them the employee's pay rate or the raise amount in any form.

Summary of Client Notification Behavior by Coverage Type

Coverage Type	Client Notified?	Shows Raise Amount?	Shows New Billing Rate?	Shows Employee Pay Rate?
Client covers full raise	Yes	Yes (full raise amount)	Yes	No
Client covers part of raise	Yes	No	Yes	No
Hello Team covers full raise	No	No	No	No

The employee's pay rate is never shown to the client under any circumstance.

Raise History Requirements

Every raise must create a permanent history entry showing:

- effective date
- old employee pay rate
- new employee pay rate
- old billing rate
- new billing rate
- total raise amount
- client-covered amount
- Hello Team-covered amount
- reason
- internal notes

- submitted by
- approved by
- approval date and time
- status

Suggested Raise Statuses

- Draft
- Pending Approval
- Approved
- Rejected
- Effective
- Cancelled

Bonus Workflow

There should also be a structured workflow called:

Give Bonus

This should live under Employee Pay.

A bonus is separate from hourly rate changes and should not permanently change the employee's pay rate.

Bonus Form Fields

The bonus workflow should include:

- bonus amount
- reason
- effective payroll date
- coverage type
- if partial, client-covered amount
- internal notes

Bonus Coverage Type Options

- Client covers full bonus
- Client covers part of bonus

- Hello Team covers full bonus

Bonus Logic

If Client Covers Full Bonus

The employee receives the full bonus.
The client is billed the full bonus amount.
The client notification may show the full bonus amount and confirmation that the employee received it. Same principle as a full-coverage raise: the client paid for it, so they can see what they paid for, but not the employee's pay rate.

If Client Covers Part of Bonus

The employee receives the full bonus.
The client is billed only the portion assigned to them.
The remaining portion is absorbed internally.
The client notification should only show the billing amount being charged. It should not show the total bonus amount or the employee's pay rate.

If Hello Team Covers Full Bonus

The employee receives the full bonus.
The client is not billed.
The client sees nothing, receives no notification, and sees no mention of the bonus anywhere client-facing.

Bonus History Requirements

Every bonus must create a permanent history entry showing:

- bonus amount
- payroll date
- client-covered amount
- Hello Team-covered amount
- reason
- internal notes
- submitted by
- approved by

- date and time
- status

Approval Requirements

All financial changes should require a two step approval process before becoming active.

This includes:

- direct employee pay edits
- direct billing rate edits
- raises
- bonuses

The workflow should be:

- one authorized admin submits the change
- another authorized admin approves it
- only after approval does it take effect

No change should go live immediately unless the user has a specific emergency override permission, if such a permission is ever added.

Validation Rules

For Raises

- raise amount must be greater than zero
- client-covered amount cannot be negative
- client-covered amount cannot exceed total raise amount
- if full client coverage is selected, client-covered amount must equal total raise amount
- if full Hello Team coverage is selected, client-covered amount must be zero
- if partial coverage is selected, client-covered amount is required

For Bonuses

Same validation logic as raises.

For Direct Billing Rate Edit

- must require reason
- must require effective date
- must store old and new rate

For Direct Employee Pay Edit

- must require reason
- must require effective date
- must store old and new rate

Notification Rules

Client is notified only when their billing is changing, with these specific rules:

- if the client covers the full raise: client is notified and may see the raise amount
- if the client covers part of the raise: client is notified only of the new billing rate, not the raise amount
- if Hello Team absorbs the full cost: client is not notified and sees nothing
- same pattern applies to bonuses

Client notifications should never show:

- the employee's pay rate under any circumstance
- the employee's raise amount when the raise is split or absorbed
- the internal coverage split
- internal decision notes
- margin information

Audit Trail Requirements

Every compensation-related change must be fully auditable.

For each action, store:

- action type

- affected employee
- old value
- new value
- effective date
- reason
- notes
- created by
- approved by
- timestamps
- whether the client was notified
- whether billing changed

Formula Logic

Raise

- New employee pay rate = current employee pay rate + total raise amount
- New billing rate = current billing rate + client-covered amount

Bonus

- Employee receives full bonus amount
- Client billing receives only the client-covered bonus amount

---

Summary of Expected Behavior

The admin portal must separate employee pay management from billing rate management.

Employee Pay should handle:

- raises
- bonuses
- direct pay edits

Billing Rate should handle:

- direct billing rate edits

A raise may update both areas, but the billing rate should not be manually edited inside the raise form as if it is the same field.

The system must support full client coverage, partial client coverage, and full internal coverage.

The employee always receives the full raise or full bonus entered.

The client is billed only for the portion assigned to the client.

Client-facing visibility of the raise amount follows a strict rule:

- full client coverage: client sees the raise amount
- partial client coverage: client sees only the new billing rate, never the raise amount
- full Hello Team coverage: client sees nothing, no email, no portal entry, no mention

The employee's actual pay rate is never shown to the client under any circumstance.
